

MODSECURITY™ PRO M1100: AN ESSENTIAL PCI COMPLIANCE SOLUTION

WHAT IS THE PCI DSS?

The Payment Card Industry (PCI) Data Security Standard (DSS) is a set of security requirements established by the leading payment brands. These requirements are designed to protect sensitive account data such as credit card numbers, customer names and contact information.

MUST I COMPLY?

Any organization that “stores, processes or transmits” credit, debit or other payment card information must comply with the PCI DSS.

WHY SHOULD I BE CONCERNED?

Non-compliance with the standard may result in data breaches, fines and fees, lawsuits, federal oversight and lost customers.

Based on the world’s most deployed web application firewall with over 15,000 users, Breach Security’s ModSecurity Pro M1100 defeats a wide range of application-layer attacks and prevents data leakage.

Pre-packaged rule sets protect web applications against Open Web Application Security Project (OWASP) Top 10, Microsoft® Outlook® Web Access (OWA), Apache™, IIS, PHP, ASP, and ASP.NET vulnerabilities.

THE MODSECURITY PRO M1100 FACILITATES COMPLIANCE WITH 7 OF 12 PCI DSS REQUIREMENTS

Requirement 2

Blocks known vulnerabilities through signatures developed and updated by Breach Security Labs.

Requirement 3

Stops cardholder data from leaking out of web applications.

Requirement 4

Inspects packets within SSL traffic and detects and blocks attacks.

Requirement 5

Integrates with anti-virus software for optional scanning of uploaded files.

Requirement 6

Acts as a “virtual patch” for application vulnerabilities, including those specifically identified in Requirement 6.5.

Requirement 10

Includes PCI-specific reports which show details of payment card data use for audit purposes as well as the system’s overall level of compliance.

Requirement 12

Ensures the proper security configuration for attack prevention and enables policy-setting for web application protection across the organization.
